

Título: From unstructured texts to RDF: extracting information and querying using only the schema

Data: 05/07/2019

Horário: 10:00h

Local: Sala de Seminários - Bloco 952

Resumo:

Given a natural language question or a keyword search string, our goal is to translate it into a formal query as SPARQL that captures the information needed. We propose Von-QNER system for interlinking structured and unstructured data. Von-QBNER also enables the user to query over structure knowledge base using natural language question.
